1. DESCRIPTION - USE
   . Module dedicated to Nemo SX System.
   . It performs conversion from the Nemo SX bus to Modbus RS485 protocol.

2. RANGE
   . Cat. n° SXI485: Nemo SX/Modbus RS485 Interface
   Width: 1 module. 17.8 mm width.

3. OVERALL DIMENSIONS

4. PREPARATION - CONNECTION
   Fixing:
   . On symmetric rail EN/IEC 60715 or DIN 35 rail
   Operating positions:
   . Vertical, Horizontal, Upside down, On the side
   Power Supply:
   . Mandatory in 12 V d.c. via the specific Power supply module Cat n° SXAA230
   . Two ways:
     via specific communication patch cords (cat. nos SXAC250/500/1000) to connect at the downstream through dedicated ports
     via specific communication rails (cat. nos SXAR18/24/36) to connect at the rear through dedicated connectors.

Technical data sheet: IDP000166EN_01
Updated: 
Created: 31/08/2017
4. PREPARATION – CONNECTION (continued)

Recommended tools: . For fixing: flat screwdriver 5.5 mm (6 mm maximum).

Data connection (Nemo SX modules inter-connection): . Via specific communication patch cords (cat. nos SXAC250/500/1000)

Allow data transmission between the different Nemo SX modules. This type of connection is recommended when there are few Nemo SX modules, distributed all over the enclosure.

Implementing: with this configuration, the plastic protection cover of the backside communication ports on the Nemo SX module must be kept on.

Data connection (Nemo SX modules inter-connection) (continued):

. Via specific communication rails (cat. nos SXAR18/24/36).

This type of connection is recommended when there are several Nemo SX modules on the same DIN row.

Implementing: with this configuration, the plastic protection cover of the backside communication ports on the Nemo SX module must be removed.
4. PREPARATION – CONNECTION (continued)

Data connection (Nemo SX modules inter-connection)
(continued)
- Via a mix between specific communication patch cords and communication rails in order to create a link between several rows.

Two situations:
- Individually connected with communication rails.
  The communication patch cord allows to connect two rows.
- Individually connected with communication patch cords & communication rail.
  The communication patch cords allow to connect Nemo SX module on a row and to connect two rows.

Front USB port:
- Allows, if needed (e.g. for configuration), to connect the Nemo SX/Modbus interface to a computer via a “type B” micro USB - USB commercial cable.
- Via the IME – Nemo SX configurator software (download for free) is possible to:
  - test a Nemo SX installation
  - configure the modules characteristics if the lateral DIP Switches remain on 0000 position (for the modules provided with)
  - make the remote and extended addressing procedure (see §6.2.2)

5. GENERAL CHARACTERISTICS

Front face marking:
- By permanent ink pad printing (red line) and laser marking

Lateral side marking:
- By laser.
  left side: Standard and programming information
  right side: cabling and traceability information

Technical data sheet: IDP000166EN_01
Updated: - Created: 31/08/2017
5. GENERAL CHARACTERISTICS (continued)

Lateral side marking:
- Upper face.

Signalling LEDs:
- Interface is equipped with 3 signalling LEDs:
  - "ER": Communication error led → it blinks red if there is an error on the communicating bus
  - "TX" and "RX": frame transmission and reception signalling led → they blink yellow when there is communication activity on the bus

Switch to insert the 120Ω termination resistance (see §6.2.2 “RS485 Wiring diagram”)

Marking indicating that the address of the Interface is the tenth of the Modbus address

Multi-Functions button:
- Gives information about the operating state on the module

Multi-Functions button (continued):
Possible states:

<table>
<thead>
<tr>
<th>Led color</th>
<th>State</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Slow blinking</td>
<td>Error (e.g. addressing error)</td>
<td></td>
</tr>
<tr>
<td>Fast blinking</td>
<td>No function</td>
<td></td>
</tr>
<tr>
<td>Steady (without pressing the multifunction button)</td>
<td>System alarm detected (see Note*)</td>
<td></td>
</tr>
<tr>
<td>Steady (pressing the multifunction button longer than 20 sec.)</td>
<td>Total reset [any firmware updates are preserved]</td>
<td></td>
</tr>
<tr>
<td>Slow blinking</td>
<td>System process is running. Wait until the Led turns steady</td>
<td></td>
</tr>
<tr>
<td>Fast blinking (pressing the multifunction button for 10 sec.)</td>
<td>put in “Stand-by” the Nemo SX module (no remote action and communication available)</td>
<td></td>
</tr>
<tr>
<td>Steady</td>
<td>System OK, connection is running</td>
<td></td>
</tr>
<tr>
<td>Slow blinking</td>
<td>No function</td>
<td></td>
</tr>
<tr>
<td>Fast blinking</td>
<td>Device’s firmware update in progress</td>
<td></td>
</tr>
<tr>
<td>Steady</td>
<td>No function</td>
<td></td>
</tr>
</tbody>
</table>

* Note
- Possible system alarms detected by the Modbus/Nemo SX interface:
  - loss of communication with a Nemo SX module
  - error in addressing procedure: possible mix between local and remote address (see § 6)
  - duplicate function error: two Nemo SX modules with the same function have the same address.
- To turn off the system alarm:
  - solve the problem according to the indication of the alarm
  - push the Multifunction button on the Interface → the led become steady green

RS485 communication port’s characteristics:
- Programmable addresses: from 1 to 247
- Galvanically isolated respect to auxiliary supply
- Standard RS485 3 wires, half-duplex (+, -, Signal ground); for the RJ45 connector, pin 4 (-), pin 5 (+) and pin 8 (SG)
- Protocol Modbus® RTU
- Nemo SX/Modbus Interface automatically detects the Modbus parameters of other devices in the system and automatically sets its own Modbus parameters.
- Possible values:
  - Baud rate: 1,2 - 2,4 - 4,8 - 9,6 - 19,2 - 38,4 - 57,6 - 115,2 kbps
  - Parity bit: none, even, odd
  - Stop bit: 1 or 2
5. GENERAL CHARACTERISTICS (continued)

**Insulation voltage:**
- \( U_i = 400 \text{ V} \)

**Pollution degree:**
- 2 according to IEC/EN 60898-1.

**Overvoltage category:**
- III

**Dielectric strength:**
- 2500 V

**Plastic material:**
- Self-extinguishing polycarbonate.
- Heat and fire resistant according to IEC/EN 80695-2-12, glow-wire test at 960°C.
- Classification UL 94 / IECEN 60695-11-10: V1

**Ambient operating temperature:**
- Min. = -25°C. Max. = +70°C

**Ambient storage temperature:**
- Min. = -40°C. Max. = +70°C

**Protection Index:**
- Protection index of terminals against direct contacts: IP2X (IEC/EN 60529).
- Protection index of terminals against solid and liquid bodies (wired device): IP 20 (IEC/EN 60529).
- Protection index of the front face against solid and liquid bodies: IP 40 (IEC/EN 60529).
- Class II, front panel with faceplate.

**Average weight per device:**
- 0.050 kg.

**Volume when packed:**
- 0.21 dm³.

**Consumption:**
- Values at 12 V.d.c.

6. SYSTEM ARCHITECTURES

The Nemo SX is a polyvalent system and, according to the needs of the customer, can be set up and/or used as “Stand-alone” or “Supervised” system. Based on this choice the configuration and addressing methods are different.

Four possible architectures are provided:

- **6.1 Stand alone system**
  - 6.1.1 with local addressing (through the track wheel)
  - 6.1.2 with remote addressing (through a computer)

- **6.2 Supervised (Computer Supervisory System)**
  - 6.2.1 with local addressing
  - 6.2.2 with remote addressing

**6.1 Stand-alone system**

- **Stand alone** = autonomous system. To be used by the end-user if it is not necessary to have a computer for the supervision outside the envelope. Everything can be manage on site.

**6.1.1 Stand-alone system with local addressing (through the track wheel)**

Local addressing advantages:
- No configuration software needed to set-up the installation
- **It is not necessary to use a computer to manage settings** (configurations, test, ...) and to use the system (visualize and be alerted, ...). Everything can be done through the Mini configuration module (local display, cat. no SXV01). [Refer to the technical sheet dedicated to this module for details].
- No communication Interfaces or gateways are required.
- Installation can be done without the intervention of a System Integrator

**Programming procedure:**

- For Nemo SX modules which need some: mandatory through to lateral DIP-switch of each Nemo SX modules (see § "Module configuration" in the technical sheet of each device).

**Addressing procedure:**

- For all Nemo SX modules: mandatory through the track wheel located on the top upper face of each Nemo SX modules
- Marked from 0 to 9 in order to locally define the Modbus address of the Nemo SX modules

**Consequences of the local addressing mode (through the track wheel):**

- Each device of the system must be addressed.
- Addresses available: from 1 to 9
- Address 0 not permitted
- It is possible to assign to several devices the same address with the purpose of grouping different functions, **because they are related to the same electrical circuit**. For example it is possible to assign the same address to a multifunction signalling module (cat. no SXMC02), a multifunction control module (cat. no SXM0C1), a measuring module, and so on. In this way on the Nemo SX mini configuration module (local display) the grouped function will be displayed as a unique “device” with all grouped functions. [Refer to the schemes hereunder]

**Note for the mini configuration module (local display)**

- It is possible to assign it the same address as another Nemo SX through the programming menu of the device
- The mini configuration module can be placed everywhere in the Nemo SX bus
6. SYSTEM ARCHITECTURES

6.1 Stand-alone system (continued)

6.1.2 Stand-alone system with remote addressing (through a computer)

Remote addressing advantages:
- Whole configuration (addresses and functions) can be set up through the Nemo SX Configuration software
- Configuration software available for free
- Automatic detection of the Nemo SX modules installed in the system (characteristics, functions, configuration...)
- Increased settings possibilities: load shedding function
- Increased addressing: up to 30 Modbus addresses in a system

Programming procedure:
- For Nemo SX modules which need some: mandatory through to lateral DIP-switch of each Nemo SX modules (see § “Module configuration” in the technical sheet of each device).

Addressing procedure:
- It is not necessary to address the Nemo SX modules. The track wheel must be left in default position “0”.
- All the addressing/configuring procedure will be done with the Configuration Software (available online for free)
- With remote addressing, the software does the automatic detection of modules installed in the system but the supervision is not possible until the user assign the remote address and all the characteristics to each module.

Note: it is mandatory to connect the computer to the mini configuration module with a "type B" micro - USB cable. [For more details, refer to the technical sheet dedicated to this module].

Technical data sheet: IDP000166EN_01
Updated: -  Created: 31/08/2017
6. SYSTEM ARCHITECTURES

6.1 Stand-alone system (continued):

6.1.2 Stand-alone system with remote addressing (through a computer) (continued):

Consequences for the system architecture:
- for 1 mini configuration module (cat. no SXV01)
  - up to 30 Nemo SX modules (eg. 30 devices grouped per functions with addresses from 1 to 30)

It is possible to assign to several devices the same address with the purpose of grouping different functions, because they are related to the same electrical circuit. For example it is possible to assign the same address to a multifunction signalling module (cat. no SXMC02), a multifunction control module (cat. no SXM0C1), a measuring module, and so on. In this way on the Nemo SX display or in a supervision system the grouped function will be displayed as a unique “device” with all grouped functions. [Refer to the schemes here under]

Note for the mini configuration module (local display)
- It is possible to assign it the same address as another Nemo SX
- The mini configuration module can be placed everywhere in the Nemo SX bus

6.2 Supervised system (Computer Supervisory System)

Supervised system = System to be used through a Computer Supervisory System to remotely read data from the Nemo SX devices and/or do operations on these devices (e.g. commands of a motor driven or contactor ...).

6.2.1 Supervised system with local addressing (through the track wheel)

Local addressing advantages:
- No configuration software needed to set-up the installation
- Installation can be done without the intervention of a System Integrator

Programming procedure:
- For Nemo SX modules which need some: mandatory through to lateral DIP-switch of each Nemo SX module (see § “Module configuration” in the technical sheet of each device).

Addressing procedure:
- For all Nemo SX modules: mandatory through the track wheel located on the top upper face of each Nemo SX modules
- Marked from 0 to 9 in order to locally define the Modbus address to Nemo SX modules

In this system the Modbus address of an Nemo SX module device or group of modules (several functions) is obtained considering the address of the interface Modbus/Nemo SX Interface as tenth and the address of a device or group of function as unit (e.g. Interface address 1 = 10 → address of module n°5 = Modbus address 15)
6. SYSTEM ARCHITECTURES (continued)

6.2 Supervised system (Computer Supervisory System) (continued)

6.2.1 Supervised system—Local addressing (through the track wheel) (continued)

Consequences of the local addressing mode (through the track wheel):

- Each device of the system must be addressed.
- Addresses available: from 1 to 9
- Address 0 not permitted

It is possible to assign to several devices the same address with the purpose of grouping different functions, because they are related to the same electrical circuit. For example, it is possible to assign the same address to a multifunction signalling module (cat. no SXMC02), a multifunction control module (cat. no SXMC01), a measuring module, and so on. In this way on the Nemo SX display or in a supervision system the grouped function will be displayed as a unique “device” with all grouped functions. [Refer to the scheme hereunder]

Note: In this configuration the Modbus address of an Nemo SX module device or group of modules (several functions) is obtained considering the address of the interface Modbus/Nemo SX Interface as tenth and the address of a device or group of function as unit (e.g. Interface address 1 = 10 and device address = 5 → Modbus address = 15)

Consequences for the system architecture:

- for 1 IP/Modbus gateway (cat. no SXIIP):
  - up to 81 Modbus address
  - mandatory limit of max. 9 Modbus/Nemo SX interfaces or max. 1000 m of Modbus cable (cable Belden 9842, Belden 3106A or equivalent).
- for 1 Modbus/Nemo SX Interface (cat. no SXI485):
  - up to 30 Nemo SX modules (ex. 30 devices grouped per functions with addresses from 1 to 9)

Note: With local addressing, the Modbus/Nemo SX interface, does the automatic detection of modules (characteristics, functions, configuration...)

Technical data sheet: IDP000166EN_01

Updated: -

Created: 31/08/2017
6. SYSTEM ARCHITECTURES (continued)

6.2 Supervised system (Computer Supervisory System) (continued)

6.2.2 Supervised system with remote addressing (through a computer)

Remote addressing advantages:
- Whole of configuration (addresses and functions) can be done remotely through the Nemo SX Configuration software
- Configuration software available for free
- Automatic detection of the Nemo SX modules installed in the system (characteristics, functions, configuration...)
- Increased settings possibilities: load shedding function
- Increased addressing: up to 32 Modbus/Nemo SX interfaces
- Increased addressing: up to 247 Modbus addresses in a system

Programming procedure:
. For Nemo SX modules which need some: mandatory through to lateral DIP-switch of each Nemo SX modules (see § "Module configuration" in the technical sheet of each device).

Note: via the configuration software it is possible to assign all the functions and characteristics of each Nemo SX module

Addressing procedure:
. It is not necessary to address the Nemo SX modules. The track wheel must be left in default position "0".
. All the addressing/configuring procedure will be done with the Configuration Software (available online for free)
. With remote addressing, the software does the automatic detection of modules installed in the system but the supervision is not possible until the user assign the remote address and all the characteristics to each module.

Note: it is mandatory to connect the computer to the different Modbus/Nemo SX interface with a "type B" micro USB - USB cable (one interface at a time). [see § "Front USB port"]
6. SYSTEM ARCHITECTURES (continued)

6.2 Supervised system (Computer Supervisory System) (continued)

6.2.2 Supervised system with remote addressing (through a computer) (continued)

Consequences for the system architecture:

- for 1 IP/Modbus gateway (cat. no SXIIP):
  - up to 247 Modbus address
  - Because of Modbus: mandatory limit of max. 32 Modbus/Nemo SX interfaces or max. 1000 m of Modbus cable (cable Belden 9842, Belden 3106A or equivalent).

- for 1 Modbus/Nemo SX Interface (cat. no SXI485):
  - up to 30 Nemo SX modules or grouped modules (e.g. 30 devices grouped per functions with addresses from 1 to 30)

It is possible to assign to several devices the same address with the purpose of grouping different functions, because they are related to the same electrical circuit. For example it is possible to assign the same address to a multifunction signalling module (cat. no SXMC02), a multifunction control module (cat. no SXM0C1), a measuring module, and so on. In this way on the Nemo SX display or in a supervision system the grouped function will be displayed as a unique "device" with all grouped functions. [Refer to the scheme up here]
6. SYSTEM ARCHITECTURES (continued)

6.2 Supervised system (continued)

6.2.2 Supervised system with remote addressing (continued)

RS485 Wiring diagram:

(1) BELDEN 9842, BELDEN 3106A (or equivalent) max. 1000 m
Cat. 6 (FTP/UTP) max. 50 m

(2) SXAR18/SXAR24/SXAR36 - SXAC250/SXAC500/SXAC1000

Note: It is not necessary to dedicate a RS485 / IP gateway for the Nemo SX system. It is possible to mix several RS485 devices.

7. COMPLIANCE AND APPROVALS

Compliance to standards:
. Compliance with Directive on electromagnetic compatibility (EMC) n° 2014/30/EU
. Compliance with low voltage directive n° 2014/35/EU.
. Electromagnetic Compatibility:
  IEC/EN 61131-2

Environment respect – Compliance with EU directives:
. Compliance with REACH regulation: at the date of the publication of this document no substance from the candidate list is present in these products.

Plastic materials:
. Halogens-free plastic materials.
. Marking of parts according to ISO 11469 and ISO 1043.

Packaging:
. Design and manufacture of packaging compliant to decree 98-638 of the 20/07/98 and also to directive 94/62/CE.
