

BTICINO > Solution for energy efficiency > Supervision and measurement > Accessories, software and interfaces

F4N105

Programmable Module, allows the storage of up to 5760 has values of: phase voltage and chained, phase current and neutral, frequency, active, reactive and apparent power, power factor, harmonic distortion, voltage and current, alarm status, positive and negative active energy, reactive energy positive and negative , average power and peak power average. The module comes in addition of the Modbus communication port RS485 integrated

Technical features

Brand	BTicino
Series	Measuring and supervision
